

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

1. Destructuring the book object using `{ author, id, image, title } = book;` easily extracts the necessary properties from the book object, making them accessible within the function.

2. What parts of encapsulating your logic were hard?

Error handling: If the book object is missing one or more properties, it may lead to unexpected behavior or errors in the subsequent code

If the code changes over time and the properties of the book object change, the code that relies on the destructuring assignment may need to be modified which potentially may affect multiple parts of the code.

3. Is abstracting the book preview a good or bad idea? Why?

Good. it keeps the code clean and if done right the code is easily reusable around the code.
